

# Road guide

# [Latexfalt]

**constructive, colourful and binding**

# [Company philosophy]

The LATEXFALT customers are confronted with a continuously changing environment that is growing increasingly complex. As a result, flexibility is key to the LATEXFALT BV organisation in order to respond to these changes. Joining the strengths of three different companies has created an innovative, modern and market-focused enterprise, which strives to attract and maintain solid relationships with its customers, suppliers, employees and other contacts. LATEXFALT comprises a constructive, colourful and binding product portfolio and organisation, enabling the company to ensure long term quality and efficiency of service to its customers.

# [History]

LATEXFALT BV came into being when Vauatol, Cindu [road construction] and NWM and LATEXFALT decided to join forces. Each of these companies had already acquired 50 years of experience with bitumen and polymer emulsions for construction and road applications, as well as attaining leading positions at home and abroad. The decision to merge reinforced the company's breadth and depth alike, which in turn creates added value to the customer. Product development, production and technical advice have undergone noticeable expansion, and synergy now exists in diverse areas. The company currently employs 80 people.

# [Applications and products]

LATEXFALT BV manufactures products and systems based on bitumen and polymers that are delivered or applied in the form of emulsions or hot binding agents. The products are primarily used to bind or adhere natural aggregates. Years of experience have resulted in a wide range of easy to use products and constructive solutions. In addition, the balanced formulas for various applications are tailored to each specific situation.

## [Transport]

LATEXFALT BV's prime location halfway between Europort and Amsterdam allows the company to provide customers with optimal logistic support. Transporting bitumen and emulsions using its fleet of mobile tanks allows for flexible storage capacity, which is necessary given the significant spread of road construction activities.

## [Quality]

The production unit and quality control laboratory have a wide range of analysis and test methods at their disposal to thoroughly inspect each product. Operations receive support from modern, automated control and management systems. The carefully set up quality and environmental protection systems have been designed with utmost practicality and flexibility to contribute to the high quality standards imposed on products and services. Continuous attention to quality, safety and the environment has earned the company ISO-9001 and VCA certification.

# Surface Dressing

A surface dressing on a roadway serves various functions: it increases the life span, offers skid resistance, provides visibility and produces a contrasting surface. The surface dressing is created by first applying an adhesive layer and then covering it with crushed stone. LATEXFALT takes care of applying the adhesive layer using its own spray trucks, which have the capacity to process hot binding agents and emulsions.

# Production

The computerized production systems comprise various units, for example heated storage for raw materials, mixing, dispersion and packaging. The factory is ideally equipped to carry out made-to-order operations. Switching from one product to the next poses no obstacle, which, from a scheduling point of view, offers flexibility to serve the frequently changing and dynamic markets with a high degree of customer service. In addition to emulsions and related products, the factory also manufactures polymer-modified bitumen.

## Floors

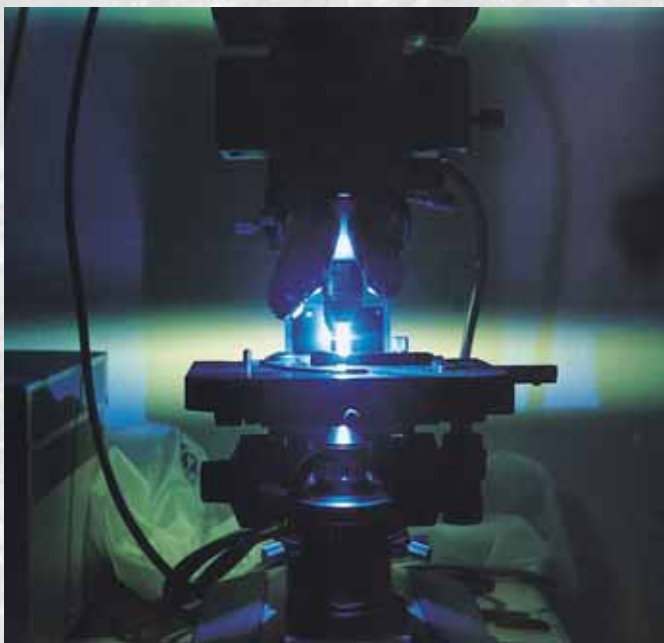

In the Dutch market, LATEXFALT has achieved a strong position in floor construction. The company installs seamless and environmentally safe floors on a contract or subcontract basis. Laser-controlled flooring machines guarantee highly accurate levels, which make these floor coverings ideally suited to many different types of industrial buildings.

## Markets

Along with its strength in the Dutch market, LATEXFALT BV also commands a considerable share in markets abroad. The company exports flooring, waterproofing and road products to many different countries around the globe. The core markets are Western Europe, Eastern Europe, the Middle East, South Africa, Latin America and Australasia. In addition to delivering its products, the company also provides technical support designed to share knowledge and experience for the optimal application and market development of its products.

## Research and development

Improvement and innovation are key in LATEXFALT research. Years of research into adhesion, mechanical properties, processability, variations in raw materials and shelf life have culminated in the current range of products and their applications. Nowadays, research increasingly focuses on specific aspects of the products, such as colour, stress and shock absorption, sound reduction and impermeability for liquids. New applications are developed for new markets in the state-of-the-art laboratory. In addition to building its own knowledge and patent position, the company looks for potential partners to collaborate on new products. LATEXFALT strives to pool areas of expertise in order to achieve an integrated approach to creating new solutions.

# [Specific areas of application for Latexfalt products and systems]

## • SURFACE DRESSING AND SLURRY SEAL

SURMAC®  
CINDUMIX®-P  
POLYMIX®-C  
VAUATOL® SURFACE DRESSING  
EMULSION  
MODIMULS®-3000  
LATEXFALT® SAFEGRIP  
LATEXFALT® MICRODECK  
SPECTRASFALT®

## • TACK COAT/BOND COAT SYSTEMS

VAUATOL® TACK COAT/BOND COAT  
EMULSION  
MODIMULS®-1000  
MODISEAL® SA

## • INDUSTRIAL FLOORING

LATEXFALT® FLOOR  
LATEXFALT® HEAVY DUTY (HD)  
LASTOFALT®  
LATEXFALT® SKIMCOAT

## • ROAD AND FLOOR REPAIR

COLDFIX®  
VAUATOL® (PATCH EMULSION)  
MODIMULS®-2000 (PATCH EMULSION  
MODIFIED)  
STABICOL® CE

## • CONCRETE PROTECTION

ELASTOFALT® EP  
ELASTOFALT® DR  
LATEXFALT® PARKDECK  
LATEXFALT® SAFEGRIP  
MODIMULS®-8000  
LATEXFALT®-SK  
FLEKKOTE®

## • WATERPROOFING

ELASTOFALT® EP  
ELASTOFALT® DR  
ELASTOFALT® SPRAYKOTE  
LATEXFALT®-RJ/ES  
STABICOL®  
DAKATOL®

## • ROAD AND FLOOR COLOR SURFACE TREATMENTS

LATEXFALT® SAFEGRIP-COLOR  
LATEXFALT® MICRODECK-COLOR  
LATEXFALT® MICRODECK-MORTAR  
SPECTRASFALT®-COLOR  
LATEXFALT® COLORTOP-AC  
LATEXFALT® COLORTOP-EP/PU  
LATEXFALT® PARKDECK-COLOR
