

Spectrasfalt® Jointfill Extra [JE]

System

Spectrasfalt JE is a single-component joint-filler for hot application.

Use

The product is suitable for filling and sealing joints in horizontal surfaces. Excellent adhesion, after pre-treatment, to concrete, asphalt and mastic asphalt.

Applications

In joints and cracks in concrete and asphalt roads and car parks, as well as joints in mastic asphalt surface layers in rooftop car parks, etc.

Product and characteristics

Spectrasfalt JE is made from a special bitumen, modified with highly elastic rubber and fillers.

Thanks to the high elasticity of the product, sealing will remain intact even at [extremely] low temperatures.

Spectrasfalt JE seals cracks and joints from 2 to 20 mm wide with no splitting or detachment. No softening takes place at elevated temperatures.

Pre-treat the joint with Spectrasfalt JE primer in order to improve adhesion.
