

## Elastofalt® EP

### System

Elastofalt EP is a high-viscosity bitumen rubber coating made from a combination of bitumen and highly elastic polymers.

### Use

The easy application, excellent waterproofing properties and highly elasticity make this an ideal product for the renovation and repair of roofs, waterproofing basements, bridges, foundations, walls and floors.

Elastofalt EP is easy to apply as a grounding for tiles in damp and wet areas such as shower and bathrooms, preventing penetration of moisture.

### Properties

Elastofalt EP adheres to practically all sub-surfaces used in construction, such as roofing sheet, cellular and standard concrete, plaster, masonry and even timber.

Once fully dry, the elasticity of the product means that any hairline cracks occurring in the subsurface and permanently bridged and sealed.
