

Elastofalt® Spraykote

Type

Elastofalt Spraykote is a bitumen emulsion with a high amount of UV resistant elastic rubber. Its unique properties are achieved out of the synthetics of bitumen and rubber giving a very tenacious, elastic seamless, water- and damp proof seal.

Use

The excellent properties make this an ideal product for waterproofing new and old roofs, waterproofing basements, foundations, walls and floors. Elastofalt Spraykote has a long term ageing stability and can safely bridge hairline cracks in the under laying surface. Therefore it gives a long life reliable protection which can be easily guaranteed for many years.

Products and characteristics

Elasticity – Extremely high in a wide temperature range from -20°C up to 80°C. After elongation of over 100% it will return quickly to the original length. Total elongation of more than 1000% have been recorded without breaking.

Durability – In fatigue tests compared with traditional roofing sheets up to a 100 times better.

Temperature – Heat resistant up to 80°C without deformation even on vertical surfaces. Cold resistance without sign of cracking at -20°C.

Ageing – Elastofalt Spraykote is very resistant to UV radiation, weathering and environmental influences.
