

Flexkote®

Type

Flexkote is a bitumen emulsion modified with natural fillers. Flexkote creates after drying a protecting top layer with optimal adhesion to Elastofalt EP, roofing-felts and concrete.

Use

Recoverable and preventive maintenance protecting against moisture, dirt and soil salts. Used as a pre-coating where acrylic roofing paint are described.

Applications

Flexkote can be applied by brush, roller or squeegee.

Product and characteristics

For use of a protected coating on Elastofalt EP, one layer of 1 kg/m² is necessary. For use as a protective coating on concrete foundations and roofs, more of 1 kg/m² are preferred, depending on the quality of the concrete, and the expected time of protection.
